

# KYLE KLUGE

ASSOCIATE ■ ELECTRICAL ENGINEERING DESIGNER

## CAREER SUMMARY

The most rewarding about my job is to have the design on I take great pride producing an engineered and well-designed electrical product and enjoy intense challenges. I have been in the industry for 21 years both as an electrician/electrical superintendent. Ten of those years I spent as an electrical superintendent and 4 years as a project manager at BNA Consulting. As a state licensed Journeyman Inside Wireman, I was involved with small and large commercial projects, higher education, medical, religious and industrial facilities and large high-end resorts. I enjoyed the knowledge that I gained in the diversity of the types of projects I was involved in. As a project manager at BNA I have engineered the same types of projects as listed above including full campus analyses for education universities and religious campuses in the USA, Central and South America.

With my background comes an understanding concerning electrical installation periods, electrical diagnostics, electrical labor rates, electrical material costs and labor hour units per the NECA standards. I know exactly how projects are to be built and offer a very strong team player role during construction.

## EDUCATION

Weber State University  
Currently Enrolled in Electrical Engineering program

## LICENSES

Journeyman Electrician  
License #:4794725-5504

Eccles Theatre
